SUMMARY

Healthcare Data Analyst with **3+ years** of experience in clinical analytics, healthcare BI, and cloud-based data platforms supporting patient operations and provider networks. Skilled in **Python, PySpark, SQL, GCP, BigQuery, Power BI, and Tableau** - with **direct experience** in patient risk modeling, EHR integration, and HIPAA-compliant reporting workflows. Passionate about building analytics that improve patient outcomes and drive healthcare operational efficiency.

EXPERIENCE

Data Analyst | Community Dreams Foundation | Remote Nov 2025 – Present

- Architected end-to-end ETL pipelines and agent orchestration workflows on Databricks as engineering lead of a **4-person team**, reducing data processing time from **3–5 days to near real-time**, improving data accuracy by **30%** through automated validation checks, and enabling HIPAA-compliant ingestion of **500K+ genomic and wearable patient records** with zero compliance incidents.
- Designed centralized MySQL data models and Power BI dashboards adopted by **5–10 clinical stakeholders** across 2 teams, surfacing real-time population health risk indicators and eliminating manual reporting cycles that previously delayed decision-making by days.
- Automated synthetic PHI-safe dataset generation pipelines for secure model testing environments, cutting ML model release cycles by 1 week per iteration (**25% faster**, measured pre/post deployment) and eliminating a recurring compliance bottleneck for the engineering team.
- Developed an FDA Safety Alert & Recall Intelligence System ingesting **100–500+ monthly enforcement records** via the OpenFDA API, auto-classifying recalls by **FDA Class I/II/III** severity tiers and reducing manual recall identification effort by **30%** through real-time automated alerting.

Data Analyst | Seattle Pacific University, operated by Sodexo | Seattle, WA Oct 2023 – June 2025

- Built interactive Power BI dashboards used daily by **2 operations managers** to track peak-hour demand, staffing utilization, and product movement across campus - driving data-backed decisions that contributed to a **5% increase** in customer satisfaction scores.
- Streamlined daily sales and inventory reporting by developing automated SQL and Excel workflows, saving **4–6 hours per week** of analyst time and enabling self-serve data access for operations managers across 2 campus locations.

Healthcare Data Analyst | Bharath Home Medicare Pvt Ltd | Chennai, India May 2022 – Aug 2023

- Developed executive dashboards tracking **\$6M+** in annual contract value and B2B/B2C revenue segmentation across a **5,000+ provider, 1,300+ location network** - directly informing board-level strategy that sustained a **97.5% client retention rate** and an average contract span of **4+ years**.
- Analyzed diagnostic and wellness data across **100,000+ patient records** to surface that Medical Rooms represented **72% of total revenue**, driving strategic resource reallocation that resulted in successfully onboarding **206 Medical Rooms** across the provider network
- Supported the client acquisition pipeline by delivering data-driven insights that contributed to securing **88 new corporate clients** - including a landmark **\$2.1M Wipro contract** across **16 sites** - while maintaining a **97.5% retention rate** across the existing provider network.

SKILLS

Healthcare & Clinical: Clinical Trial Analytics · Patient Risk Scoring · EHR Integration · Pharmaceutical Analytics · HIPAA Compliance

Programming & Cloud: Python · SQL · PySpark · R · GCP · BigQuery · Databricks · AWS S3 · Pandas · Scikit-Learn

BI & Visualization: Power BI · Tableau · Looker Studio · Plotly Dash · R Shiny · Flourish Studio

Machine Learning: Random Forest · Gradient Boosting · Neural Networks · K-Means · ROC Analysis

Certifications: Microsoft Office Specialist: Excel Associate (Score: 925/1000)

PROJECTS

Clinical Trial Patient Selection & Admission Prediction | Orange Data Mining · Neural Networks · Gradient Boosting · ROC Analysis | [GitHub](#)

Built a clinical data mining pipeline on **10,000 synthetic patient records** to predict hospital admission type as a patient stability proxy for trial screening; ROC analysis (**AUC ~ 0.50**) established that longitudinal EHR signals - not demographics alone - are required for deployable screening models, informing the architecture of a companion GCP health platform

Scalable Health Data Platform: PySpark ML & GCP Architecture | PySpark · BigQuery · Vertex AI · Cloud Healthcare API · FHIR Analysis | [GitHub](#)

Designed a production-grade GCP architecture for real-time patient risk scoring at clinical trial network scale, integrating **BigQuery, Vertex AI, Cloud Healthcare API** (FHIR-compliant EHR ingestion), and PySpark streaming pipelines - operationalizing the clinical trial screening pipeline from batch models to real-time distributed patient scoring.

EDUCATION

Master of Science in Data Analytics for Business · Seattle Pacific University, Seattle WA

Sep 2023 – Aug 2025

Bachelor of Design – Interior Design · SRM Institute of Science and Technology, Chennai, India

June 2018 – May 2022
